(54) Title of the Invention: **Golf club head with flex structure**  
Abstract Title: **Golf club head with flex structure**

(57) Embodiments of a wood-type club head having a flex structure to control the characteristic time (CT) are described herein. The club head comprises a flex structure integrally formed with the club face and the sole. The flex structure comprises a curved shape including a nadir and an apex. The flex structure allows the club face to bend rearward, relieve stress within the club face, and reduce the CT variability within a localized club face region.

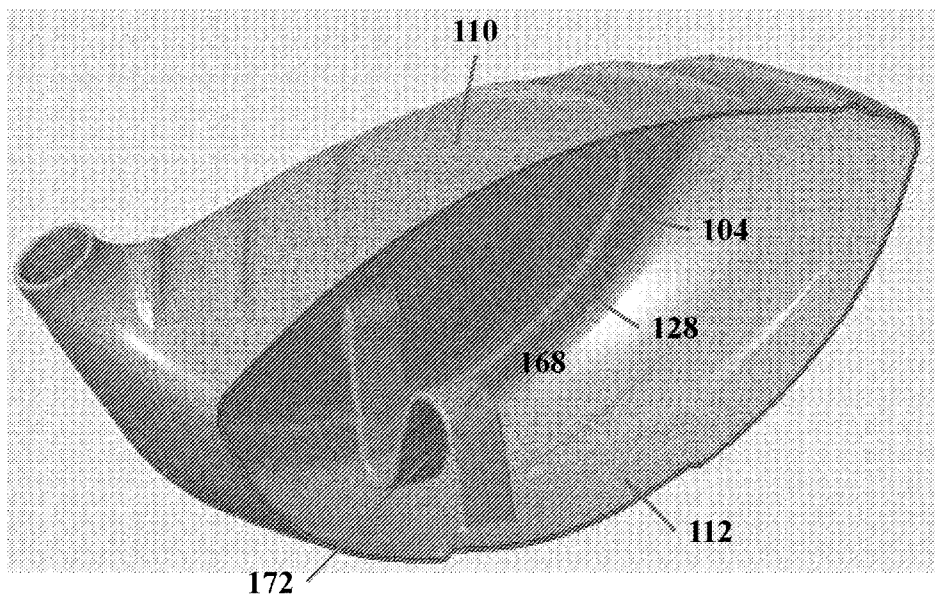

FIG. 5
