(54) **Interlinked staples and staple cartridge**

(57) To provide interlinked staples which are made possible to be fed accurately in the inside of a stapler and a staple cartridge which houses these interlinked staples.

The interlinked staples 1a are constituted by interlinking a plurality of staples 2a each of which has an elongated and straight-formed shape. The vicinities of the edge portions in the longitudinal direction of the each staple 2a are formed in trapezoidal shapes, and the widths are tapered toward the tips thereof. Also, adhesion portions 31 coated with adhesive agent are provided on

the rear surfaces of the vicinities of both the edge portions in the longitudinal direction of the each staple 2a. Also, there are provided elliptical feeding holes 32 at predetermined positions from both the edge portions of the side by which each staple 2a is interlinked. A portion between two feeding holes 32 is made to be a slit portion 33 and the respective staples 2a are cut off perfectly thereby. Portions on the outside of the two feeding holes 32 and until both the edge portions of the side by which each staple 2a is interlinked are operated as staple interlinking portions 34 and the respective staples 2a become in a state of being interlinked.

FIG. 1A

ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.

EP 11 16 7849

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
