(54) Media-processing device using an external storage device

(57) Disclosed herein is a media-processing device using an external storage device. The media-processing device includes a storage access module, an information-sourcing module, a program memory module, a system memory module, a signal-processing module, a user interface module and a control module. The control module accesses the external storage device, reads file information, and constructs contents to be displayed. When the control module receives a command to select

a media file, the control module accesses the external storage device, searches for the selected media file, reads data of the searched media file, copies the read data, and provides the copied data to be decoded. When the control module receives a command to encode a signal, the control module transmits the input signal to be encoded, constructs a media file from the encoded media data, positions the media file, copies the constructed media file when the external storage device is accessible through the storage access module.
