SUPPLEMENTARY EUROPEAN SEARCH REPORT

Application number:
EP 21 78 80 21

LACK OF UNITY OF INVENTION

The Search Division considers that the present European patent application does not comply with the requirements of unity of invention and relates to several inventions or groups of inventions, namely:

1. claims: 1-11

a bio-information correction method wherein a plurality of biological information of a previous time interval and a present time interval of the individual are retrieved by the electronic device, slopes of biological information of the corresponding time intervals are calculated, slopes of biological information predicted slopes of a next time interval are predicted from the slope changes, and biological information after the next time interval is calculated from the predicted slopes.

2. claims: 12-15

a biometrics measurement system comprising a host and at least one measuring device to measure individual biometrics, the host selecting a pairing mode or a beacon mode to establish wireless communication depending on the number of wires of the measuring devices.

None of the further search fees have been paid within the fixed time limit. The present (supplementary) European search report has been drawn up for those parts of the European patent application which relate to the first mentioned in the claims, namely claims: 1-11

The supplementary search report has been based on the last set of claims valid and available at the start of the search.
