(54) Title: PROJECTION TV WITH REDUCED CABINET DIMENSIONS

(57) Abstract: Described is a rear projection television (200) with reduced cabinet depth (214) and method of manufacturing thereof. An anamorphic projection lens (204) compresses an image and projects it along an optic path, where a cylindrical mirror expands and reflects the image within the optic path. The combination of compression and expansion facilitates in the design of a rear projection television with reduced cabinet depth.
