(54) A device for adjusting the tension of a motion transmission belt

(57) The present invention relates to a device for adjusting the tension of a motion transmission belt (2) tensioned between at least two pulleys (3A, 6A), which comprises first and second tensioner means (7, 8) each of which comprises a jockey pulley (11) supported rotatably by a respective lever (7A, 8A), said first and second tensioner means (7, 8) being capable of being supported by a support structure (9) and being capable of acting respectively on the tight span (2A) and slack span (2B) of the belt (2) of one of the two pulleys (3A, 6A); said device also comprises spring means (12) capable of acting on said levers (7A, 8A) to apply to the respective spans (2A, 2B) of the belt (2) a predetermined spring loading so as to ensure a desired tension for said belt (2) and has the characteristic that said first and second tensioner means (7, 8) are equipped with hook means (10) capable of being hooked onto said support structure (9).

ANNEX TO THE EUROPEAN SEARCH REPORT ON EUROPEAN PATENT APPLICATION NO.

Г

EP 05 00 8717

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
