(54) Title of the Invention: **Protective packaging for items**  
Abstract Title: **Protective packaging with core structure**

(57) Protective packaging 100 comprising a first part 110 formed of a first layer 102 defining a first surface, a second layer 104 defining a second surface, and a first core 106 extending therebetween; and a second part 112 formed of a third layer 102 defining a third surface, a fourth layer 104 defining a fourth surface, and a second core 106 extending therebetween. A recess 116 is formed in the first surface by a portion of the first core 106 having been compressed in a direction from the first surface to the second surface. A further recess 118 is formed in the third surface by a portion of the second core 106 having been compressed in a direction from the third surface to the fourth surface. The first and second recesses 116, 118 are opposing, contiguous recesses forming a cavity. The first and second parts may be joined by a hinge 114. The core structure may comprise a cellular structure, and may comprise a honeycomb or prismatic columnar structure.
