## (54) HYBRID AUTOMATIC REPEAT REQUEST FEEDBACK INDICATION AND FEEDBACK METHOD, DEVICE, AND BASE STATION

(57) The disclosure relates to a HARQ feedback indication and feedback method, a device, a base station, a user equipment unit, and a computer readable storage medium. The HARQ feedback indication method comprises: determining to send current downlink data to a terminal; generating uplink HARQ feedback indication information for the current downlink data, wherein a timing relationship indicated by the uplink HARQ feedback in-

dication information is obtained from a first set of timing relationships between a time domain unit of downlink data for the terminal and a time domain unit of an uplink HARQ feedback of the downlink data; and sending to the terminal the current downlink data and downlink control information (DCI) carrying the uplink HARQ feedback indication information. Embodiments of the disclosure enable a terminal to realize dynamic HARQ feedback.

#### ANNEX TO THE EUROPEAN SEARCH REPORT ON EUROPEAN PATENT APPLICATION NO.

EP 24 19 6273

5

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
